Description

Description:
When a user attempts to upload a file larger than 5MB on the Careers application form, the backend server correctly rejects the file with an `HTTP 413 (Payload Too Large)` error. However, the front-end user interface (UI) fails to handle this server response, causing the submit button to enter an infinite loading state.

Impact: This completely blocks the user from submitting the Careers application and provides no feedback regarding the file size limit. This forces a page refresh and creates severe user friction, as applicants will likely retry the same document under the assumption of a system failure

Environment:

- **Environment:** Production (https://resilio-partners.com/careers/cmsdti4zw000011h7erglpm2f/apply)

- **OS:** Windows 10 Pro
- **Browser:** Google Chrome Version 156.0.8078.81
- **Device:** Desktop/Laptop

Reproducibility: 3/3 attempts (100%)

- **Test file size:** 5.1 MB.
- **File format:** PDF.

Pre-condition:

1. User is authenticated and on a specific job application page: https://resilio-partners.com/careers/cmsdti4zw000011h7erglpm2f/apply.
2. User has a valid PDF file that is strictly larger than 5MB (e.g., 5.1MB).

Steps to Reproduce:

1. Navigate to https://resilio-partners.com/careers/cmsdti4zw000011h7erglpm2f/apply .
2. Fill the Form with all the required text fields with valid data.
3. Click the "Upload the file" button and select the 5.1MB PDF file.
4. Click the "Submit" button.

Expected Result: The system should gracefully catch the server rejection, stop the loading spinner, and display an inline validation error to the user stating: "File too large. Max 5MB."

Actual Result: The "Submit" button hangs infinitely on "Submitting…". The UI displays no error message. The Developer Tools Network tab confirms the server correctly rejected the payload with an `HTTP 413 Content Too Large` error. but the frontend did not show any error to user.

Severity: Sev-2 (High) ***Justification:*** It completely blocks the user journey and provides no feedback, forcing a hard refresh that deletes their inputted data.
