Description

Description: Multiple static informational cards across the website apply the CSS rule cursor: pointer on hover, changing the mouse arrow into a clickable hand icon even though the cards have no link or click action.

Impact: Creates a false UX affordance—users repeatedly click the cards expecting to open a detail page and assume the website is unresponsive.

Environment:

- **Production:** (https://resilio-partners.com/)
- **OS:** Windows 10 Pro
- **Browser:** Google Chrome v156.0.8078.81
- **Device:** Desktop/Laptop (HP ProBook 640 G2)

Reproducibility: 3/3 attempts (100% reproducible)

- Desktop Mouse Hover

Pre-conditions:

1. User opens https://resilio-partners.com/ on a desktop browser with a mouse/trackpad.

Steps to Reproduce:

1. Navigate to https://resilio-partners.com/ and scroll to the informational feature/service cards.

1. Hover the mouse cursor over the body of the static cards.

1. Click the cards and observe that no navigation or modal action occurs.

Expected Result: Unclickable informational cards should retain the default arrow cursor (cursor: default), reserving cursor: pointer strictly for interactive links and buttons.

Actual Result: The cursor turns into a clickable hand pointer (cursor: pointer) over non-interactive cards.

Severity — Sev-4 (Low) Justification: Minor usability/UX confusion with no functional blockage; resolvable via a 1-line CSS update. But, User might end up confused whether the content was unclickable or is it the their system's issue.
